

Integrated systems for greater safety and efficiency

The innovative system platform creates an open system structure, which integrates smoothly into current and future technologies. In this way, not only a much more powerful infrastructure can be created in hospitals, but also a new level of comfort, safety and efficiency. New ways are taken and open up completely new possibilities for the highest quality of care.

The system can be adapted flexibly to changing tasks and structures and integrate other systems, for example:

- *Danger alarm systems,*
- *Vital signs surveillance,*
- *Infotainment,*
- *Telephony and*
- *Hospital Information Systems (HIS).*

The effect is that this networking enables greater Efficiency and Comfort for all.
